1. The following is an examiner's statement of reasons for allowance:

Yang et al. (US 2004/0030077) teaches catalyst composition comprising a solid titanium catalyst procatalyst and an trialkyl aluminum cocatalyst for olefin polymerization, wherein the solid titanium catalyst procatalyst is prepared by the steps of (i) preparing a magnesium solution by contacting-reacting a halogenated magnesium compound with an alcohol, (ii) reacting the magnesium solution with an hydroxyl group containing ester and a alkoxy containing silane to provide a solution, and (iii) produce a solid titanium procatalyst by reacting the solution of (ii) with a mixture of a titanium compound and haloalkane compound; and (iv) contacting the solid titanium procatalyst with an alkylaluminum chloride. Yang's catalyst preparation process is substantially similar to those of the instant claims except in the preactivation step (iv) only an alkylaluminum chloride is used rather than the mixture of alkylaluminum chloride and haloalkane mixture or haloalkane of the instant claims. Furthermore, applicants' Comparative Examples 1 and 2 show unexpected catalytic activity increase when the mixture of alkylaluminum chloride and haloalkane mixture is used instead of alkylaluminum chloride alone in step (iv). Therefore, the instant claims are not obvious variations over Yang's teaching.

For the record, Yang et al. (KR 2001-053,663, its US family US 6,762,145), cited as X reference in EP search, is considered; however, Yang '663 is not the closest prior art.

In view of the foregoing, the instant claims are deemed to be novel.
